- ③ Container Monitoring.
- ④ cloud Monitoring.

⑤ TOC Review.

⑥ Notebook

Report → Schedule.

Alert → Trigger Condition

Dynatrace → DQL + DPL
↓
Parse = ""

DDa = DDSGL

REGEX P-like (,)

1. Available Code → Deploying DD Agent

2.

Since Talend doesn't have direct integration with Datadog, can you explain the best approach to collect, forward, and monitor Talend logs in Datadog for effective alerting and visualization

AI-Driven Incident Investigation & Response

How Datadog uses AI for incident investigation, automated response, key features, and real-time use cases.

Bits AI SRE Capabilities

How Bits AI SRE investigates alerts, identifies root causes, and suggests remediation.

How it reduces MTTR and on-call effort through automated triage and context gathering.

Developer Support & Automation

How Datadog provides AI-driven code issue detection and fix recommendations.

How Bits Dev Agent detects issues, generates fixes, and creates automated pull requests with tests.

Security Monitoring & Triage

How Datadog handles security signal triage, prioritization, and threat investigation.

How Bits AI Security Analyst performs triage and recommends actions.

Licensing & Feature Access

Required Datadog licensing and versions to access these AI and advanced features.

PoC & Integrations

Approach for a deeper working session and leveraging Slack, ServiceNow, and PagerDuty integrations.

Automation & Proactive Monitoring

How Bits AI and Watchdog detect issues, create tickets, run diagnostics, and execute/suggest remediation.

Kubernetes Monitoring Setup

Prerequisites and steps for enabling Datadog monitoring in Kubernetes.

Unified Observability Dashboards

Building dashboards that integrate metrics, logs, and traces across applications, databases, servers, network devices, and storage.
