

RUM → Real User Monitoring :- Monitor Real time user experience.

APM = Backend services.

Page load, clicks, frontend error, resource like JS/CSS/APIs  
Calls, long task, core web vitals.

APM + / loading → Backend services → Slow

RUM → user BLK → Book now → 8sec. → 155, Backend API  
lapi/payment was slow.

APM + RUM

RUM →  
Page view, user action, Resource timing.  
Frontend errors, long tasks, Core web vitals  
Session, geography/latency, Server replies

we complain -

→ RUM → APM traces → Logs → Infra Mechan.

RUM → we open any travel

↓  
RUM capture page loads / clicks

↓  
user click search form

↓  
RUM capture API / xhr req.

↓  
APM capture Backend trace

↓  
detailed error or req. details.

APM  
↓  
help show detailed e.

Instrumentation :  
→ client side  
→ Server side.

① client side :- DD JS code inside ET Frontend Page.

Browser open ET Page

↓  
DD JS SDK loads

↓  
SDK starts collecting user experience data

↓  
Data is sent to DD RUM.

② Server Side :-

RUM script from Backend side.

Package manager

Method  
├── CDN Sync.  
├── CDN Async.

Package Mgr:-

① React ② Angular ③ Vue ④ Next.js ⑤  
Node-Based Frontend projects

→ HTML page.

CDN Asyn: — JS snippet → HTML page.  
 client side → CDN Asyn.
